SKILLS

Python

C#

C++

Java

R

SQL

Matlab

HTML

CSS

Microsoft Office

Solidworks

Rhino3D

Blender

Autodesk Inventor

Grasshopper3D

WORK EXPERIENCE

Computer Vision/Data Engineer — **Sep '22 - Present**
Sonoscope, Longueuil, Quebec, Canada

- Participate in the architecture, design, and development of a new category of medical device.
- Design and implement 2D/3D computer vision algorithms, data pipelines, etc...
- Implement the ETL process and using STL files as data.
- Collaborate with the quality assurance team and clinicians in defining the requirements and writing the associated documentation.
- Elaborate testing strategies in accordance with the specifications.
- Refactor, optimize, and develop tools to support the codebase.

Data engineer and scientist — **May '22 - Aug '22**
Sunnetgroup Canada, Montreal, Quebec, Canada

- Used innovative methods to automatically extract data from scanned PDF documents
- Extracted patterns and trends using this data
- Used tools like PowerBI and python libraries to visualize trends

Computational Designer — **Sep '21 - Apr '22**
Podform3D, Montreal, Quebec, Canada

- Modeled medical orthotics parametrically using Rhino3D and Grasshopper3D
- Developed an end-to-end design algorithm to go from a scanned patient's foot, as a point-cloud, to a finished medical orthotic represented by an extruded parametric surface
- Used **machine learning** tools such as **principal component analysis** to smartly reorient the scans of patients' feet
- Integrated features required by customers on a frequent basis

Research Associate — **Feb '21 - Feb '22**
University of Waterloo, Waterloo, Ontario, Canada

- Created a design of experiment to study the manufacturability of metal samples as a function of geometrical parameters
- **Developed statistical models** to predict the manufacturability of 3d printed parts partly by **plotting and visualizing** surface roughness as a function of a sample's thickness and overhanging angle
- Directed and supervised the writing of scientific articles

CERTIFICATIONS

The Data Scientist's Toolbox

2022
Johns Hopkins University

R Programming

2022
Johns Hopkins University

Finance & Quantitative Modeling for Analysts Specialization

2022
University of Pennsylvania

ACHIEVEMENTS

Rapid+TcT Conference

2019
I was the second runner up for the poster challenge, winning a 250$ (USD) price in 2019

CanadaMakes3D Challenge

2018
I was a finalist of the Canada Makes 3D challenge

EDUCATION

MASc - Mechanical & Mechatronics Engineering — **Sep '18- Oct '20**
University of Waterloo - Waterloo, Ontario, Canada

Thesis' title: Coupled Experimentally-Driven Constraint Functions and Topology Optimization utilized in Design for Additive Manufacturing

Bachelor - Mechanical Engineering — **Sep '13 - May '18**
McGill University - Montreal, Quebec, Canada

I specialized in computational/parametric design of mechanical parts, FEA and 3D printing

PUBLICATIONS

Geometrical Degrees of Freedom for Cellular Structures Generation: A New Classification Paradigm — **Apr '21**

Status: Accepted and Published

PROJECTS

My personal website — **Sep '20**
Tool: Python, HTML, CSS, Ruby, JavaScript, Markdown

I developed a website using GitHub Pages to display my projects. The projects I have done have helped me reinforce my knowledge of python, and python libraries such as **matplotlib, numpy, math, scipy, skimage, visvis, sklearn, Tensorflow, scikit, yahoo finance, bqplot**.

My 3D printer — **May '15**
Tool: Reprap kit

During my research internship, I was eager to learn about 3D printing technologies. I ordered the parts of a reprap printer (Prusa i3) and built it from scratch.
